Project Highlights

Construction on this 12-screen movie theater with stadium seating started in November 1997, following a particularly wet fall. Since the bedrock was only 4' below the finished floor, there was the constant challenge of keeping the site dry enough to finish the foundation work. This problem was solved by dewatering on a continuous basis.

In order to clear the area for the new theater, extensive asbestos abatement and the demolition of a 115,000 square foot existing structure had to be completed.

Extensive winter protection measures were taken to continue working through harsh weather and stay on schedule.
